1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States;

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

~~24-27, 41-44~~

2. Claims ~~21-27~~ are rejected under 35 USC 102(e) as being anticipated by Muffoletto et al. (Muffoletto)

Reference is made to claims 1 and 7 of the patent to Muffoletto. It is inherent that with the thickness of the active material being 0.001 inch (25 microns) that the particle size would be within the microstructured size range as claimed in claim 27.

3. Claims ~~21-27~~ are rejected under 35 USC 102(e) as being anticipated by Visco et al. (Visco)

See column 4, lines 45-63 of Visco along with column 5, lines 30-55. As stated for the Muffoletto patent above, the particle size of claim 27 is inherent in view of the thickness of the active layer in Visco.

4. Claims ~~21~~ and ~~24-28~~ are rejected under 35 USC 102(b) as being anticipated by Gay et al. (Gay)

See Example 1 of Gay and in particular column 5, lines 54-56 for the particle size of the iron sulfide.

5. Claims ~~21~~ and ~~24-26~~ are rejected under 35 USC 102(b) as being anticipated by Askew et al. (Askew)

Reference is made to column 2, line 25 through column 3, line 4 of the patent to Askew.

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

- 41/44  
7. Claims 21 and 28 are rejected under 35 USC 103 as being obvious over Muffoletto or Visco each taken in view of Gay.

Muffoletto and Visco do not specifically teach a nanostructured iron sulfide. As set forth previously in this action, Gay sets forth a nanostructured iron sulfide in Example 1 of this patent. To utilize in the teachings of either Muffoletto or Visco the 15 nanometer particle size of Gay would have been obvious so that the active material would have been packed more tightly and would have produced a greater power output.

8. The US patent applications cited on pages 12 and 15 of the present application should be updated to show their most recent status.

Art Unit: 1745

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Though not prior art, Amatucci shows an iron sulfide layer of interest.

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John S. Maples whose telephone number is 703-308-1795. The examiner can normally be reached on alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gabrielle Brouillette can be reached on 703-308-0756. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9310 for regular communications and 703-872-9311 for After Final communications.
